Refreshing the Power BI Report

You need to have the export of these four files from the following sources

Defender for Cloud – Secure Score CSV File

The recommendations in Microsoft Defender for Cloud helps improve cloud security posture by aggregating security findings into a single score. Recommendations are grouped into security controls, which are logical groups of related security recommendations reflecting vulnerable attack surfaces

Defender for Cloud – MCSB CSV File

The Microsoft Cloud Security Benchmark (MCSB) provides prescriptive best practices and recommendations to help improve the security of workloads, data, and services on Azure and multi-cloud environments. This benchmark focuses on cloud-centric control areas with input from a set of holistic Microsoft and industry security guidance.

Microsoft Defender XDR CSV File

Microsoft Secure Score provides a holistic measure of an organization's security posture across various Microsoft services, including Microsoft 365 and Azure, focusing on identity, data, devices, apps, and infrastructure (for example, Entra ID, Teams, Exchange Online, SharePoint Online, and more).

Microsoft Purview Excel File

Microsoft Purview Compliance Manager improvement actions help organizations assess and manage their compliance posture across multicloud environments by providing recommended guidance aligned with data protection regulations and standards, with automated testing and continuous monitoring.

Follow the instructions for exporting the required files in the document:

OK

Cancel

Enter the new parameter values in the dialog to update the data sources and other values.

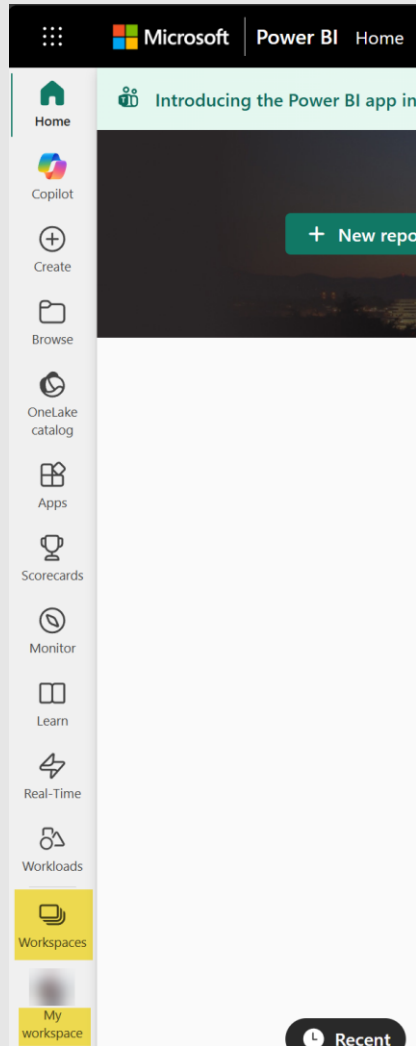

Refreshing Power BI Report

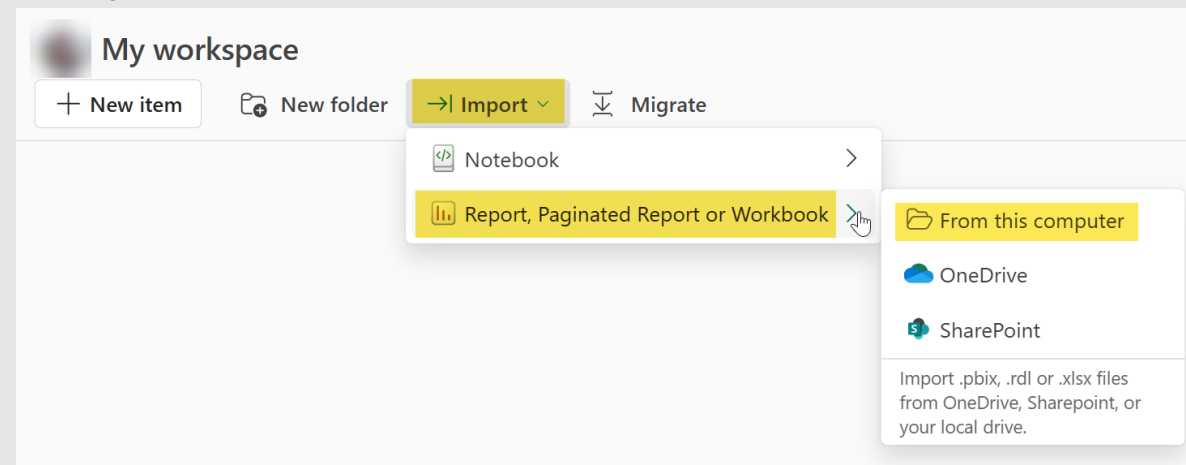

Pay attention to the notification header regarding pending changes. Select **Apply changes** to load the updated data.

Power BI Service

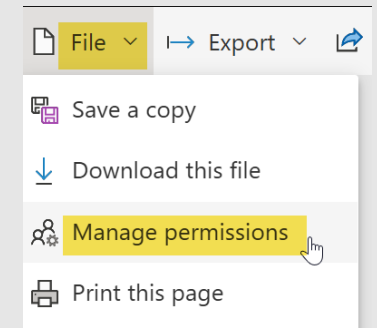

The .pbix file can be uploaded to the Power BI service (<https://app.powerbi.com>) and shared with other users within the organization. The appropriate Power BI license is required (e.g., E3 and E5)

Choose **Workspaces** and either create a new workspace or select an existing one where access is available. Alternatively, select **My workspace** and upload the .pbix file there.

After the upload, permissions can be managed from the **File** menu.

Thank you
